You save 62% off list price on this tool set.

These are the HVAC tools necessary for service of Pool heat pumps.  
 In addition to these tools you will need a digital multi-meter capable of reading AC milliamps, as well as Volts, and Ohms.  
 Sears or Kmart has one available at their stores for around \$30.00 that will do everything needed.  
 Bring your multi-meter with you when you come for training.  
 If you drive to the training you will take your tools home with you. If you fly in, we will ship to you.  
 NOTE: This tool kit is not complete. You will have to purchase/rent oxygen and acetylene tanks, as well as refrigerant recovery tanks
