Information on changes to the top and vent kits for UHS heaters.

Information on the change to UHS tops and vent kits

Hayward has implemented a change to all UHS Heaters, effective 10/19. See below for details.

- UHS Heaters are now manufactured with a single-piece top.
 - These heaters do not have a 'Hot Top' panel that can be removed for indoor installation.
 - This change affects all UHS Heaters, beginning with serial # 21131910101582001.
 - Models affected: H150, H200, H250, H300, H350, H400, H500,
- When installing indoors:
 - Remove the single piece top.
 - Replace it with the old-style top, which is included with Indoor Vent Kits (starting 10/19).
- For SMALLER diameter positive pressure vent kits (4" for H250, 6" for H400, and 6" for H500):
 - The installer must purchase an appliance adapter for the same manufacturer as the vent pipe.
 - Appliance adapters manufactured by DuraVent and HeatFab are available to order from Hayward.
- For LARGER diameter positive pressure vent kits for H250 and H400, as well as ALL positive pressure kits for H150, H200, H300, and H350:
 - Vent kits come with the correct size HeatFab appliance adapter.
 - These cannot be swapped for DuraVent adapters, as the heaters are not certified for large diameter DuraVent vent pipe.
- NOTES:
 - Indoor Vent Kits now have the vent diameter as the last digit of the part number. For example: UHXNEGVT14008 is the negative pressure vent kit for H400 heaters and it requires 8" venting.
 - **See the attached spreadsheet for a complete list of part numbers and configurations.**
 - New top panels and indoor vent kits are backward compatible
